

Managed Services

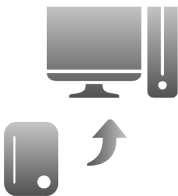

You run your business, we take care of IT.

We Store

Hosting

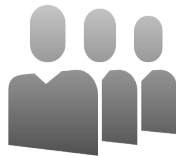

Like any business you have multiple servers running several services: internal and external websites, CRM applications, ERP solutions, together with all their connected databases. Your server environment might have grown together with your company and is in need of optimization. When you do not find the time or do not have the knowledge, we can manage your services and make sure that all your critical applications keep running in the best condition. Some examples of the hosting services we offer: Microsoft Exchange, CRM or Sharepoint, as well as Open Source applications like OpenERP.

Virtualization

Cut costs, streamline your architecture and consolidate your servers to achieve greater speed and availability of your IT infrastructure. We can convert your servers, both Windows and Linux, to virtual machines so you can lower the number of physical servers and thus reduce operational costs. Virtualization ensures high availability and delivers prompt disaster recovery offering you sustained business continuity. Cost effective, easy to recover, faster and more expandable.

We Support

Service Desk & 2nd Line

Our team is on stand by to provide detailed and immediate support whenever you have a general usability or application-specific question. The team behind this service also provides coverage for all aspects of computer service and network support. It supplies scheduled preventive maintenance, proactive monitoring, security, and data, as well as application management in-line with your expectations. Managing your IT services will be transparent, thanks to our detailed and comprehensive reports. Your network, your staff, your systems, our mission to keep IT running.

Oracle

We can provide support on Oracle's best in class technologies. This support includes, but is not limited to installation, monitoring, maintenance, tuning, back up and recovery, data migration, as well as assistance with the design and implementation of cluster technology and BI solutions. We ensure maximum performance from systems with less complexity, business risk and cost.

We Retain

Backup

With our backup solutions, your data will be safely available when and where you need it. We offer company-wide disaster recovery routines with minimal cost and effort. Our solution is based on a disk-based BDR device which is deployed at your site. Together with our virtualization expertise, we can get you back up and running in no time in case disaster strikes. We are able to recover a single email, a complete mailbox, individual files or complete databases, all according to your requests. Should you still like more security, we can offer you offsite solutions too.

Audit

When your IT landscape has grown over the years together with your company, it might be time to assess it and have it reviewed by experienced professionals. We can audit your network set-up, your security policies, your installed applications, your back up and retention plans among others. Upon audit completion we will offer you a comprehensive report, with clear indications of what aspects need your attention now rather than later.

We Suggest

Office 365

It's familiar Microsoft Office delivered through the cloud. Everyone can work together easily with anywhere access to email, web conferencing, documents, and calendars. It includes business-class security. Whether you are a small business or multinational enterprise, Office 365 offers plans designed to fit your organization.
